Manual of Botulinum Toxin Therapy
Second Edition

Daniel Truong
The Parkinson and Movement Disorder Institute, Orange Coast Memorial Medical Center, Fountain Valley, CA, USA

Mark Hallett
Department of Neurology, The George Washington University School of Medicine and Health Sciences, Washington, DC, USA

Christopher Zachary
Department of Dermatology, University of California, Irvine, Irvine, CA, USA

Dirk Dressler
Movement Disorders Section, Department of Neurology, Hannover Medical School, Hannover, Germany

Medical Illustration: Mayank Pathak
To my wife, Diane Truong and my children, Karl, Christian, and Gianni, whose love I cherish; to Norman Seiden, whose idealism I adore; and for Thomas Collins, for whose support I am grateful

Daniel Truong

To my wife and family and to the patients whose participation in research helps to move knowledge forward

Mark Hallett

To my wife Janellen, and to my children Laura, George, Cameron, Tague and Alexa, all of whom make my life so entertaining

Christopher Zachary

I am most grateful to my colleagues for their discussions, my patients for their encouragement and most of all to my wife, Doctor Fereshte Adib Saberi, for her professional and emotional support

Dirk Dressler
Contents

List of contributors page ix
Preface xiii

1 The pretherapeutic history of botulinum neurotoxin 1
Frank J. Erbguth

2 Botulinum neurotoxin: history of clinical development 8
Daniel Truong and Mark Hallett

3 Pharmacology of botulinum neurotoxins 12
Daniel Truong and Mark Hallett

4 Immunological properties of botulinum neurotoxins 16
Hans Bigalke, Dirk Dressler and Jürgen Frevert

5 Treatment of cervical dystonia 22
Daniel Truong, Karen Frei and Cynthia L. Comella

6 Examination and treatment of complex cervical dystonia 35
Gerhard Reichel

7 Ultrasound guidance for botulinum neurotoxin therapy: cervical dystonia 46
Katharine E. Alter

8 Treatment of blepharospasm 60
Carlo Colosimo, Dorina Tiple and Alfredo Berardelli

9 Botulinum neurotoxin in oromandibular dystonia 64
Roongroj Bhidayasiri, Francisco Cardoso and Daniel Truong

10 Treatment of focal hand dystonia 71
Barbara Illowsky Karp, Chandi Das, Daniel Truong and Mark Hallett

11 Botulinum neurotoxin therapy for laryngeal muscle hyperactivity syndromes 85
Daniel Truong, Arno Olthoff and Rainer Laskawi

12 The use of botulinum neurotoxin in otorhinolaryngology 92
Ranier Laskawi, Arno Olthoff and Oleg Olegovich Ivanov

13 Treatment of hemifacial spasm 101
Karen Frei

14 Spasticity 107
Mayank S. Pathak and Allison Brashear

15 The use of botulinum neurotoxin in spastic infantile cerebral palsy 119
Ann Tilton and H. Kerr Graham

16 The role of ultrasound for botulinum neurotoxin injection in childhood spasticity 128
Bettna Westhoff

17 The use of botulinum neurotoxin in spasticity using ultrasound guidance 133
Andrea Santamato, Franco Molteni and Pietro Fiore

18 The use of botulinum neurotoxin in tic disorders and essential hand and head tremor 160
Joseph Jankovic

19 Treatment of stiff-person syndrome with botulinum neurotoxin 168
Diana Richardson and Bahman Jabbari

20 Botulinum neurotoxin applications in ophthalmology 174
Peter Roggenkamper and Alan Scott

21 Cosmetic uses of botulinum neurotoxins 181
Joshua Spanogle, Dee Anna Glaser and Christopher Zachary

Preface

The clinical use of botulinum neurotoxin comes into its third decade of existence with many new off-label indications for a host of different medical conditions. Originally used specifically for strabismus, blepharospasm and spasmodic torticollis, botulinum neurotoxin is now commonly employed in diverse disciplines by many specialists. Its unique properties require local application for efficacy... and while this is relatively simple in some locations such as the skin and superficial muscles of the face, it is much more complicated in others, at times requiring ultrasound guidance or endoscopic assistance. Not all neurotoxins are the same and, therefore, an in-depth understanding of their pharmacological actions, limitations and complications is required.

This book tries to answer many of the questions posed above with the contributions from a team of international experts. As in the first edition, the emphasis in this book is on technique, so it is richly endowed with illustrations concerning accurate access techniques to help physicians to become familiar and fully competent.

The readers will find instruction and discussion about widely accepted treatments, and others that are less known. While some treatments will gain wide acceptance, others may be passing fads, and we recommend that the readers evaluate them critically. We hope that the book will serve as teaching aid for the beginner, and a practical resource for the advanced user.

We are grateful to the contributors of this book and trust that physicians who employ botulinum neurotoxin in their practices will find it valuable.

We thank Michael Tsao, Mary Ann Chapman and Lisa Brauer for their assistance; Dr Hiep Truong for drawing some of the pictures. We also express our appreciation to our families and friends for their support and understanding during the preparation of this book.
