Contents

Preface ................................................. v
Contributors ....................................... ix

SECTION I: REMINISCENCES
1. On the Discovery of Precursor Processing ........................................ 3
   Donald F. Steiner
2. The Prohormone Theory and the Proprotein Convertases: It Is All About
   Serendipity ........................................ 13
   Michel Chrétien

SECTION II: BIOCHEMISTRY AND CELL BIOLOGY
3. The Proprotein Convertases, 20 Years Later ..................................... 23
   Nabil G. Seidah
4. Insights from Bacterial Subtilases into the Mechanisms of Intramolecular
   Chaperone-Mediated Activation of Furin ............................................ 59
   Ujwal Shinde and Gary Thomas
5. The Novel Role of Cathepsin L for Neuropeptide Production Illustrated
   by Research Strategies in Chemical Biology with Protease Gene Knockout
   and Expression ................................................................. 107
   Lydiane Funkelstein and Vivian Hook
6. In Vitro Assay for Protease Activity of Proprotein Convertase Subtilisin
   Kexins (PCSKs): An Overall Review of Existing and New Methodologies ..... 127
   Ajoy Basak, Andrew Chen, Swapan Majumdar, and Heather Palmer Smith
7. Inhibitor Screening of Proprotein Convertases Using Positional
   Scanning Libraries ............................................................ 155
   Iris Lindberg and Jon R. Appel
8. Analyses of PCSK9 Post-translational Modifications Using Time-of-Flight
   Mass Spectrometry ............................................................... 167
   Thilina Dewpura and Janice Mayne

SECTION III: MOLECULAR BIOLOGY AND GENETICS
9. The Molecular Biology of Furin-Like Proprotein Convertases in Vascular
   Remodelling ........................................................................ 191
   Philipp Stawowy and Kai Kappert
10. Identification of the Myosin Heavy Polypeptide 9 as a Downstream Effector of the Proprotein Convertases in the Human Colon Carcinoma HT-29 Cells ........................................ 207
Nathalie Scamuffa, Peter Metrakos, Fabien Calvo, and Abdel-Majid Khatib

11. Regulation of 7B2 mRNA Translation: Dissecting the Role of Its 5′-Untranslated Region ........................................ 217
Haidy Tadros, Gunther Schmidt, Francine Sirois, and Majambu Mbikay

12. Analysis of Epigenetic Alterations to Proprotein Convertase Genes in Disease ........ 231
YangXin Fu and Mark W. Nachtigal

13. Genetic and Functional Characterization of PCSK1 ........................................ 247
Hélène Choquet, Pieter Stijnen, and John W.M. Creemers

SECTION IV: EXPERIMENTAL MODELS

14. Prohormone Processing in Zebrafish ........................................ 257
Michael G. Morash, Kelly Soanes, and Younes Anini

15. Use of Zebrafish and Knockdown Technology to Define Proprotein Convertase Activity ........................................ 273
Babykumari P. Chitramuthu and Hugh P.J. Bennett

16. Characterization of Impaired Processing of Neuropeptides in the Brains of Endoprotease Knockout Mice ........................................ 297
Margery C. Beinfeld

17. Quantitative Peptidomics of Mice Lacking Peptide-Processing Enzymes ........ 307
Jonathan Wardman and Lloyd D. Fricker

18. A Proteomic Protocol to Identify Physiological Substrates of Pro-protein Convertases ........................................ 325
Guiying Nie and Andrew N. Stephens

19. Neurophenotyping Genetically Modified Mice for Social Behavior ........ 343
Ramona M. Rodriguez, Jennifer S. Colvin, and William C. Wetsel

Index ........................................ 365
